***Claim Objections***

1. Claims 6-13 are objected to because of the following informalities:
2. The claim limitation "baseplate having terminals and equipped with an auxiliary" renders the claims indefinite. It appears applicant intends to recite --auxiliary module--. Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by DeLine et al. (6,124,886).
5. DeLine et al. discloses an "auxiliary module", carrier member 20, having a "plurality of busbars", circuit member 62 that is encapsulated therein. The circuit member 62 has electrical contact portions 66a-66b, 70a-70b, 66c-66d, 68a-68b and 68c-68d. Regarding claim 5, DeLine et al. discloses that circuit member 62 is formed as "stamped, metallic wire" and as shown in drawing figure 3 is clearly bent.

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

Art Unit: 2851

2. Ascertaining the differences between the prior art and the claims at issue.
  3. Resolving the level of ordinary skill in the pertinent art.
  4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
8. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over the acknowledged prior art in view of Schultz, Jr. et al. (5,097,592).
9. The acknowledged prior art differs from the claimed invention as the acknowledged prior art uses a wiring harness and not the claimed "relaying component."
10. Schultz, Jr. et al. teaches "harnesses are difficult to handle by machine, making it difficult to automate either harness making or harness handling or to employ robotic assembly techniques. Installation errors are common." Schultz, Jr. et al. teaches that in order to solve these problems the electrical conductors and electrical terminals are encapsulated within synthetic resin.
11. It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to replace the wire harness with a circuit panel as taught by Schultz, Jr. et al. One would have been motivated to so modify the acknowledged prior art to prevent wiring errors when assembling the camera module.
12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David M Gray whose telephone number is 703-308-1698. The examiner can normally be reached on M-T & T-F 7:30-6:00.
